Introduction to the Next Generation Science Standards
PRESENTER

• Melissa A. Navarro, M. Ed.

• Doctoral Student, CGU-SDSU Joint Doctoral Program

• Multiple Subject Spanish Science Teacher Educator
PRESENTATION OUTLINE

1. History of the NGSS
2. Organization of the NGSS
3. Structure of the NGSS
4. Implementation Pathway Model
5. Science Lesson Plan Structure*
History of the NGSS
HISTORY OF THE NGSS

• Prior to the NGSS, the state of California used the “Science Content Standards for California Public Schools K-12” (1998)

• Since then, new research has been presented about the ways we learn science
  • affects the way we should be teaching science

• The groups that got together to begin the conversation of the new standards were:
  ➢ National Research Council (NRC)
  ➢ National Science Teachers Association (NSTA)
  ➢ American Association for the Advancement of Science (AAAS)
  ➢ Achieve

National Research Council 2015
NEXT GENERATION SCIENCE STANDARDS
Organization of the NGSS
THE THREE DIMENSIONS OF NGSS

1. Scientific and Engineering Practices
2. Crosscutting Concepts
3. Disciplinary Core Ideas
DIMENSION 1: PRACTICES

• Scientific and engineering practices are needed to engage in investigations

• Previous standards referred to these as “skills;” however “skills” do not take into account the fact that specific knowledge is also required in order to perform a scientific investigation.
DIMENSION 1: PRACTICES

Eight behaviors/practices are required depending on whether the investigation has a scientific or engineering approach, the practice looks different.

1. Question asking and problem definition
2. Model development and usage*
3. Planning and conducting investigations
4. Data analysis and interpretation
5. Mathematical and computations thought process
6. Solution design and creating explanations*
7. Participating in evidence-based argumentation*
8. Obtaining, evaluating and communicating information*
DIMENSION 2: CROSSCUTTING CONCEPTS

The second dimension of the NGSS holds the seven crosscutting concepts that are the means through which information is ordered.

1. Patterns
2. Cause and Effect
3. Scale, Proportion, and quantity
4. Systems and System values
5. Energy and matter: Flows, cycles, and conservation
6. Structure and function
7. Stability and change
DIMENSION 3: DISCIPLINARY CORE IDEAS

• Have a broad importance across multiple sciences or engineering disciplines or
• Are a key organizing concept of a single discipline
• There are 44 core ideas across the areas of Life Sciences, Physical Science, Earth and Space Sciences, and Engineering, Technology, and Applications of Science
Structure of the NGSS
READING THE NGSS: ANATOMY AND ARCHITECTURE

Anatomy and Architecture of a NGSS Performance Expectation

Scientific and Engineering Practices
The 8 scientific and engineering practices are the major practices that scientists employ as they investigate and build models and theories about the world, and that engineers use as they design and build systems.

Crosscutting Concepts
The 7 crosscutting concepts are concepts that bridge disciplinary boundaries, thus having explanatory value throughout much of science and engineering.

Disciplinary Core Ideas
The disciplinary core ideas have broad importance across multiple sciences or engineering disciplines or are key organizing concepts of a single discipline. There are 44 of these core ideas across the areas of Life Sciences, Physical Science, Earth and Space Sciences, and Engineering, Technology, and Applications of Science.

Plan an investigation to provide evidence that the change in an object’s motion depends on the sum of the forces on the object and the mass of the object. [Clarification Statement: Emphasis is on balanced (Newton’s First Law) and unbalanced forces in a system, qualitative comparisons of forces, mass and changes in motion (Newton’s Second Law), frame of reference, and specification of units.] [Assessment Boundary: Assessment limited to forces and changes in motion in one-dimension in an inertial reference frame and to change in one variable at a time. Assessment does not include the use of trigonometry.]

Title and Code
MS-PS2-2

Performance Expectations
Students who demonstrate understanding can:

- MS-PS2-2. Plan an investigation to provide evidence that the change in an object’s motion depends on the sum of the forces on the object and the mass of the object. [Clarification Statement: Emphasis is on balanced (Newton’s First Law) and unbalanced forces in a system, qualitative comparisons of forces, mass and changes in motion (Newton’s Second Law), frame of reference, and specification of units.] [Assessment Boundary: Assessment limited to forces and changes in motion in one-dimension in an inertial reference frame and to change in one variable at a time. Assessment does not include the use of trigonometry.]

Planning and Carrying Out Investigations
- Planning and carrying out investigations is an essential part of science. It is the process by which questions are answered and evidence is used to support or reject hypotheses about the world. Investigations that use multiple variables and provide evidence to support or reject hypotheses are often called experiments. Experiments can be used to determine the relationship between two or more variables. To carry out an investigation, scientists determine what evidence is needed to answer the questions they have. They then design, carry out, and analyze their investigation to determine what evidence, if any, supports or does not support their hypotheses.

Connections to Nature of Science
Scientific Knowledge Is Based on Empirical Evidence
- Scientific knowledge is based upon logical and empirical connections between evidence and explanations.

Connections to Other DCIs in this Grade Band

Connections to Other DCIs Across Grade Levels

Next Generation Science State Standards Crosswalk

Mathematics:
- MS-ED.2 Reason abstractly and quantitatively (MS-ED.2)
- MS-EE.3 Write, read, and evaluate expressions in which letters stand for numbers (MS-EE.3)
- MS-EE.6 Solve multiplication real-life problems associated with positive and negative rational numbers in any form, using tape diagrams to help. Apply properties of operations as strategies to multiply and divide. Recognize that multiplication is commutative and represent it with box diagrams and number lines. (MS-EE.6)
- MS-GE.1 Understand the conventions associated with the Cartesian coordinate system. Use coordinates to find distances between points in the Cartesian plane by applying the Pythagorean theorem (MS-GE.1)

Science:
- NGSS.ME.2 Analyze and interpret data, and make and defend claims and predictions based on data (NGSS.ME.2)
- NGSS.WH.1.1 Conduct simple experiments or simulations to answer a question (including a self-generated question), drawing on several sources and generating additional related questions that allow for multiple avenues of exploration (NGSS.WH.1.1)
READING THE NGSS: ABBREVIATIONS AND CODES

Abbreviations and Codes

**Science and Engineering Practices (SEPs)**
1. Asking questions (for science) and defining problems (for engineering)
2. Developing and using models
3. Planning and carrying out investigations
4. Analyzing and interpreting data
5. Using mathematics and computational thinking
6. Constructing explanations (for science) and designing solutions (for engineering)
7. Engaging in argument from evidence
8. Obtaining, evaluating, and communicating information

**Crosscutting Concepts (CCCs)**
1. Patterns
2. Cause and effect: Mechanism and explanation
3. Scale, proportion, and quantity
4. Systems and system models
5. Energy and matter: Flows, cycles, and conservation
6. Structure and function

Implementation of the NGSS
IMPLEMENTING THE NGSS

• The California Department of Education drafted the *Next Generation Science Standards Implementation Plan for California*

• The three phases are:
  1. Awareness
  2. Transition
  3. Implementation

THE NGSS IMPLEMENTATION PATHWAY MODEL (SPIEGEL, ET AL., 2014)
Figure 3. Stages in the NGSS Implementation Pathway Model

<table>

<th>Stage 2</th>
<th>Stage 3</th>
<th>Stage 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial Exposure to NGSS</td>
<td>Deepening Understanding of NGSS</td>
<td>Planning Instruction around NGSS</td>
<td>Full Alignment of Instruction to NGSS</td>
</tr>
</tbody>
</table>

**Stage 1 (Initial Exposure to NGSS)**
- Teachers are beginning to learn and become familiar with the Conceptual Shifts (Innovations), the three dimensions of learning, and the performance expectations of the NGSS.

**Stage 2 (Deepening Understanding of NGSS)**
- Teachers engage in on-going research and the building of personal understanding of the Conceptual Shifts (Innovations), the three dimensions of learning, and the performance expectations of the NGSS.

**Stage 3 (Planning Instruction around NGSS)**
- Teachers begin planning lessons and units aligned to the three dimensions and performance expectations of the NGSS, returning to the previous stage as needed to ensure coherence with the Conceptual Shifts (Innovations) of the NGSS.

**Stage 4 (Full Alignment of Instruction to NGSS)**
- Teachers design and plan instruction aligned to NGSS curriculum and assessment.

**Outcomes might include**
- Describe the Conceptual Shifts (Innovations) of the NGSS and discuss implications for teaching and learning.
- Identify the three-dimensions of the NGSS.
- Explain the anatomy and architecture of a NGSS standard.
- Identify NGSS resources for further study and information.

Outcomes might include:
- Express how teaching and learning look in the NGSS.
- For any standard, identify each of the dimensions connected to the performance expectation.
- Describe what a Science and Engineering Practice and Crosscutting Concept would look like in their classroom, providing examples of how they might engage students in these dimensions.
- For a performance expectation, identify a possible performance task that would assess student learning around the performance expectation.

Outcomes might include:
- Review grade level or subject area performance expectations.
- Take a current lesson/unit and translate it to the NGSS.
- Using the BSCS 5E Instructional Model or similar model, plan a learning cycle that integrates the three dimensions of the NGSS.
- Identify and describe a performance task that could be used in the classroom to assess student performance and understanding around a performance expectation or multiple performance expectations.

Outcomes might include:
- Implementative and summative assessments aligned to NGSS.
- Create curriculum maps or implement district curriculum guides.
- Implement NGSS adopted curriculum that is aligned to AIM, EQuIP, or similar rubrics.

J. Spiegel and K. Bess (San Diego County Office of Education), Y. Shimoiyo (Riverside County Office of Education), A. Quan (Los Angeles County Office of Education). 2014.
Science Lesson Plan Structure
THE BSCS 5E INSTRUCTIONAL MODEL
BY RODGER W. BYBEE

FIGURE 1.
Summary of the BSCS 5Es instructional model.

Engagement
The teacher or a curriculum task helps students become engaged in a new concept through the use of short activities that promote curiosity and elicit prior knowledge. The activity should make connections between past and present learning experiences, expose prior conceptions, and organize students’ thinking toward the learning outcomes of current activities.

Exploration
Exploration experiences provide students with a common base of activities within which current concepts (i.e., misconceptions), processes, and skills are identified and conceptual change is facilitated. Learners may complete lab activities that help them use prior knowledge to generate new ideas, explore questions, and design and conduct an investigation.

Explanation
The explanation phase focuses students’ attention on a particular aspect of their engagement and exploration experiences and provides opportunities to demonstrate their conceptual understanding, process skills, or behaviors. In this phase teachers directly introduce a concept, process, or skill. An explanation from the teacher or other resources may guide learners toward a deeper understanding, which is a critical part of this phase.

Elaboration
Teachers challenge and extend students’ conceptual understanding and skills. Through new experiences, the students develop deeper and broader understanding, more information, and adequate skills. Students apply their understanding of the concept and abilities by conducting additional activities.

Evaluation
The evaluation phase encourages students to assess their understanding and abilities and allows teachers to evaluate student progress toward achieving the learning outcomes.
<table>
<thead>
<tr>
<th>5E Stage</th>
<th>Student Behaviors</th>
<th>Teaching Strategies</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engage</td>
<td>• Asks questions such as, Why did this happen? What do I already know about this? What can I find out about this? How can this problem be solved? • Shows interest in the topic. • Engages in problem, expresses own ideas.</td>
<td>• Raises questions or problems. • Elicits responses that uncover students’ current knowledge about the concept/topic. • Helps students make connections to previous work. • Posts learning outcomes and explicitly references them in the lesson.</td>
</tr>
<tr>
<td>Explore</td>
<td>• Test predictions and hypotheses. Forms new predictions and hypotheses. • Discusses problems with others. • Records observations and ideas.</td>
<td>• Provides question or problem. • Provides common experience. • Observes and listens to students as they interact. • Acts as a consultant for students.</td>
</tr>
<tr>
<td>Explain</td>
<td>• Explains possible solutions or answers to other students. • Listens critically to and questions other explanations. • Listens to explanations offered by the teacher. • Refers to investigation. • Uses evidence from investigation in explanations.</td>
<td>• Encourages students to explain concepts and definitions in their own words. • Asks for justification (evidence) and clarification from students. • Formally provides definitions, explanations, and new vocabulary through mini lecture, text, internet, or other resources. • Builds on student explanations.</td>
</tr>
<tr>
<td>Elaborate</td>
<td>• Applies new labels, definitions, explanations, and skills in new, but similar, situations. • Uses previous information to ask questions, propose solutions, make decisions, design experiments, or complete a challenge. • Draws reasonable conclusions from evidence. • Records observations and explanations.</td>
<td>• Expects students to use vocabulary, definitions, and explanations provided previously in new context. • Encourages students to apply the concepts and skills in new situations. • Provide alternative explanations.</td>
</tr>
<tr>
<td>Evaluate</td>
<td>• Student gives another student feedback. • Evaluates his or her progress or knowledge. • Checks work with a rubric.</td>
<td>• Asks open-ended questions such as, “Why do you think...?” “What evidence do you have?” “How would you answer the question?” • Observe students. • Gathers evidence of student understanding. • Variety of assessments.</td>
</tr>

# DLE 912 Lesson Plan Template

**Lesson Name:** Circuitos

**Grade Level(s):** 4º

**Your name and Red ID:** Melissa Navarro

**Duration of Lesson:** 1 hora

### NGSS:

4-PS3-4 Apply scientific ideas to design, test, and refine a device that converts energy from one form to another

### Guiding Inquiry Question:

¿Qué es lo que causa que se prendan los focos?

### Lesson Objectives:

1. Nosotros crearemos un circuito simple y lograremos hacer que se prenda un foco
2. Nosotros agregaremos un interruptor a un circuito para lograr hacer que se prenda un foco

### Prior Skills/Knowledge Needed:

- Saber que es un foco
- Comprender cómo funciona un interruptor
- Estar familiarizado con la electricidad y con utilizar cables/alambres

### Evaluate
“Language Demands and Opportunities in Relation to Next Generation Science Standards for English Language Learners: What Teachers Need to Know”

Lee, O., Quinn, H., & Valdes, G. (2012)
This paper discusses challenges and opportunities expected as English language learners (ELLs) engage with Next Generation Science Standards (NGSS). We subscribe to a view of language learning and proficiency that is most concerned with students’ ability to use language to function in the context of their lives both in and out of school. We have discussed this view of second language acquisition and its implications for the science classroom in greater detail in a separate paper. Here, we concern ourselves with learning opportunities for ELLs in an English-speaking science classroom in which NGSS have been implemented based on the National Research Council (NRC, 2011) document “A framework for K-12 science education: Practices, crosscutting concepts, and core ideas” (hereafter called “the Framework”).

Lee, O., Quinn, H., & Valdes, G. (2012)
I. Introduction

II. Next Generation Science Standards: Focus on Science and Engineering Practices

Discusses the 3 dimensions of the NGSS

I. Intersection between Science Practices and Language Learning

Addresses issues of

1) language skills involved as students engage in science and engineering practices
2) Features of science text and science talk

I. Features of Science Language

Understanding features of science text and science talk

I. Supporting Science and Language Learning for ELLs

Five areas to support ELL’s: literacy strategies with all students, language support strategies with ELL’s, discourse strategies with ELL’s, home language support and home culture connections

I. Language Support Strategies

Purposeful activities to communicate meaning in science

Lee, O., Quinn, H., & Valdes, G. (2012)
RECOMMENDATIONS

1. Do not fear the NGSS! 😊

2. Find which part of the implementation stage your school is in, and plan your next steps.

3. Who are you collaborating with?
CONCLUSION

“To meet the outcomes identified in each stage of this model, teachers will need to dedicate significant effort in their own professional learning. Schools and districts will need to provide support and time for this learning to occur. It should be emphasized that all teachers in a school or district will not be at the same stage at any given time, thus there will be a need to differentiate professional learning for teachers in the coming months and years. In addition, the time needed to work through these stages should not be underestimated.”

(Spiegel, et al., 2014)
